CURRICULUM VITAE

DAVID TRICK

Design Technologist

Greater Seattle Area, United States
LinkedIn: linkedin.com/in/davidtrick/

PROFESSIONAL SUMMARY

Innovative and team-oriented Design Technologist with 8+ years of experience at Amazon Web Services, specializing in user experience design, front-end development, design systems, and AI-powered automation. Proven track record of launching global-scale control systems, creating comprehensive design systems, and bridging design and engineering disciplines. Expert in translating complex technical requirements into intuitive, user-friendly interfaces that delight customers and drive operational excellence. Unique combination of mechanical engineering background, graphic design education, and extensive software development experience.

AREAS OF EXPERTISE

Design & User Experience

User Experience (UX) Design, User Interface (UI) Design, Design Systems Development, Interaction Design, Visual Design, Prototyping & Wireframing, Rapid Prototyping, User Research, Accessibility Design, Design Thinking

Technical Development

Front-End Development (TypeScript, React, JavaScript), Full-Stack Development, Component Architecture, State Management, GraphQL API Integration, Back-End Services (Java, Python), Responsive Web Design, Performance Optimization

Design Tools & Platforms

Figma, CloudScape Design System, Adobe Creative Suite (Photoshop, Illustrator, InDesign), SolidWorks, Revit, 3D Printing & Additive Manufacturing

AI & Automation

Amazon Q, Quick Suite, Custom Agent Development, AI-Powered Auditing, Machine Learning Integration, Workflow Automation

Additional Skills

3D Modeling & CAD, Technical Drawing, Controls Systems (BMS, EPMS), Ignition Systems, Git Version Control, Cross-Functional Collaboration, Technical Documentation

---

PROFESSIONAL EXPERIENCE

Design Technologist

Amazon Web Services (AWS) | March 2021 - Present (5 years) | United States

Key Responsibilities:

- Design and develop user experiences for global Data Center Controls Systems serving thousands of operators worldwide
- Create and maintain comprehensive design systems and UI component libraries using Figma and CloudScape Design System
- Develop AI-powered automation tools including custom agents for automated page auditing against design standards
- Build data visualization dashboards and metrics pages for cross-functional Data Center Operations teams
- Engineer full-stack features using TypeScript, React, GraphQL, Java, and Python
- Collaborate with engineering, operations, and product teams to translate complex technical requirements into intuitive interfaces
- Pioneer AI-assisted design and development workflows to accelerate team productivity
- Drive design and front-end development best practices including accessibility standards and user-centered design methodologies

Major Achievements:

- Successfully launched global Data Center Controls Systems twice (Mechanical and Electrical), creating unified combined experience that scaled across AWS worldwide infrastructure
- Developed custom AI agents using Amazon Q and Quick Suite for automated standards compliance and code quality improvement
- Created scalable design patterns and reusable components that improved consistency across multiple product teams
- Built real-time data visualization solutions that improved operational decision-making for Data Center Operations teams
- Established AI-assisted workflows that automated standards compliance and accelerated development cycles

Technical Environment: Figma, CloudScape Design System, TypeScript, React, JavaScript, GraphQL, Java, Python, Amazon Q, Quick Suite, Git

---

Controls Design Engineer

Amazon Web Services (AWS) | April 2017 - March 2021 (4 years) | Greater Seattle Area

Key Responsibilities:

- Established and maintained global graphical standards for Data Center Controls infrastructure across multiple international vendors
- Collaborated with worldwide vendor partners to ensure consistent, high-quality visual standards
- Developed comprehensive design documentation and guidelines for Building Management Systems (BMS) and Electrical Power Monitoring Systems (EPMS)
- Led design reviews and provided expertise on control system user interface architecture
- Bridged design and engineering disciplines to create intuitive, functional control system interfaces

Major Achievements:

- Promoted to L5 in December 2018, recognizing technical leadership and significant impact on global controls standardization
- Successfully scaled design standards across diverse geographic regions and vendor implementations spanning multiple continents
- Created design documentation that ensured brand consistency and usability across AWS global data center footprint
- Balanced aesthetic appeal with operational requirements in control system interface design

Technical Environment: 3D Modeling, User Experience Design, Controls Systems, BMS, EPMS, Visual Design, Technical Documentation

---

Curriculum Developer and Instructor

Blaze Education, Inc. | January 2017 - March 2017 (3 months) | Redmond, Washington

Key Responsibilities:

- Developed curriculum standards and created course materials for Game Development and 3D Printing classes
- Instructed students on 3D modeling, design thinking, and rapid prototyping techniques
- Established educational standards that balanced technical skills with creative problem-solving

Technical Environment: 3D Modeling, 3D Printing, Game Development, Curriculum Development, User Experience Design

---

Design Engineer

UW Hyperloop | March 2016 - August 2016 (6 months) | Greater Seattle Area

Project Description: Conceptual sustainable high-speed transportation system in which pressurized capsules ride on magnetically induced levitation. Thrust and levitation generated by magnetic eddies induced via Halbach array of magnets in circular configuration.

Key Responsibilities:

- Designed test cell apparatus for magnetic levitation thrust vector measurement using strain gauges and precision instrumentation
- Created detailed CAD models and engineering drawings for test bench components (V1 and V2)
- Collaborated with multidisciplinary team on conceptual design for Hyperloop transportation system

Major Achievements:

- Designed Test Cell V1 with cement block/I-beam combination for stability and frequency damping, measuring isolated thrust vectors via strain gauges on 4"x4" Aluminum Connection Rod
- Designed Test Cell V2 bolted to Aluminum Track for improved stability, using thin rods extending parallel to track for thrust vector measurement
- Created designs allowing for switching of testing elements and adjustment of linear actuators for actual running specifications

Technical Environment: 3D Modeling, SolidWorks, CAD, Mechanical Engineering, Test Apparatus Design

---

Mechanical Sector Member - UW EcoCar Club

UW EcoCar 3 | September 2015 - June 2016 (10 months) | University of Washington, Seattle, WA

Key Responsibilities:

- Capstone Project: Devoted 3 months to machining most of connective components used within car (brackets, mounts, gears, cradles, crossbars, frames, etc.)
- Coupling Team Member: Modeled internal connective architecture between engine and frame

Major Achievements:

- Created brackets and cradle assemblies for gearbox and motor assembly mounted in subframe
- Developed 3-axis milling procedures using HSMExpress (free version of HSMWorks, Add-on to SolidWorks)
- Produced manufacturing programs and exported to machine code for physical production on trak mill at UW Machine Shop
- Optimized manufacturing layouts for ease of production

Technical Environment: SolidWorks, HSMExpress, HSMWorks, 3-Axis Milling, Manufacturing, Machining, 3D Modeling

---

Freelance Designer

Syncopated Design | May 2010 - September 2014 (4 years 5 months)

Services Provided:
Logo Design and Branding, Typography, Journal and Book Design and Layout, Website Creation and Maintenance, Animation, User Interface/Experience Design

Key Responsibilities:

- Managed client relationships and delivered projects across diverse industries
- Provided comprehensive design services from concept to final delivery
- Developed strong portfolio demonstrating versatility in visual communications and digital design

Technical Environment: Adobe Creative Suite, User Experience Design, Web Design, Branding, Typography, Animation

---

Teaching Assistant & Lab Assistant

University of Washington | September 2014 - December 2015 (1 year 4 months) | University of Washington, ME Department

Reader/Grader Responsibilities:

- Functioned as Lab TA for Mechanical Engineering courses
- Assigned team design exercises, explained requirements, and answered student questions
- Graded homework and labs
- Proctored exams

Lab Assistant Responsibilities:

- Assisted Lab Managers (Composites, Machine Shop, Learning Labs) with equipment setup and facility maintenance
- Managed surplus items and chemicals, maintained inventory of available parts
- Performed disassembly of unused/needed machines
- Setup hardware and software installation of lab computers
- Collected data in spreadsheets for Heat Press settings
- Trained on lab equipment and safety procedures

Digital Photo Editor

HD Estates | August 2012 - February 2013 (7 months) | Greater Seattle Area

Key Responsibilities:

- Used Adobe Photoshop and Bridge to process HD photos and create stunning images of houses, apartments, condos, and mansions
- Enhanced real estate photography for marketing purposes
- Maintained high-quality standards for visual presentation

Technical Environment: Adobe Photoshop, Adobe Bridge, Digital Photo Editing

---

Barista (previous Shift Supervisor)

Starbucks Coffee Company | July 2005 - May 2010 (4 years 11 months)

Key Responsibilities:

- Developed enthusiastically satisfied customers by serving highest quality coffee in 3rd place environment
- Provided knowledgeable support for Starbucks website and information on connectivity for customers and partners
- Utilized POS systems for customer transactions and cash handling

Supervisory Duties:

- Created smooth and seamless deployment of personnel ensuring comfortable and speedy work environment
- Aided in resolving customer complaints and maintaining 3rd place atmosphere
- Utilized cash handling procedures to ensure safety and security of partner's and company assets

---

EDUCATION

Bachelor of Science in Mechanical Engineering

University of Washington | 2014 - 2016 | GPA: 3.42

Capstone Project: EcoCar - Machining, SolidWorks drawings, manufacturing of connective components (brackets, mounts, gears, cradles, crossbars, frames)

Independent Research: UW Hyperloop - Test Bench Design for magnetic levitation system

Activities and Societies:
HyperLoop Team Member, EcoCar Team Member, ASME Student Chapter Member, ASHRAE Student Member

Relevant Coursework:
3D Printing (ME 498), Advanced Energy Conversion (ME 430)

Honors and Awards:

- Roy & Irene Grossman Memorial Scholarship for Scholastic Excellence (September 2015)
- Roy C. Fellows Endowed Scholarship for Scholastic Excellence (September 2015)

Bachelor of Fine Arts in Visual Communications - Graphic Design

University of Arizona | 2002 - 2008 | GPA: 3.84 | Graduated Magna Cum Laude

Additional Emphasis: Motion Graphics

Activities and Societies:
Member of IEEE for several years, Participated in Baha'i Youth Dance Workshop for 5 years

Additional Information:
First year in college was at Washington State University studying Computer Engineering. Studied Hebrew for 2 semesters.

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

Figma Essential Training: The Basics

LinkedIn Learning | Issued April 2022

Revit: MEP Families

LinkedIn Learning | Issued August 2021

PROJECTS & PORTFOLIO

AI-Powered Page Auditing Agent

2024 - Present

Description: Developed custom AI agent for automated auditing of web pages against design and coding standards

Technologies Used: Amazon Q, Quick Suite, AI/ML, Automation

Key Features:

- Automated standards compliance checking
- Design consistency validation
- Code quality improvement
- Reduced manual review time
- Improved overall quality across development teams

3D Printed Hovercraft Prototype

August 2015 - Present

Description: Toy hovercraft designed for CAD class, redesigned to be 3D printed prototype, then redesigned again with knowledge gained from first prototype

Collaborators: Armen (motor mounts and electronics wiring for first prototype)

Iterations:

- **Version 1 (V1):** Proved viability of 3D printing complicated vehicle; identified design changes needed for hovering and movement
- **Version 2:** Smaller, lighter, easier to print design with improved tab system
- **Version 2.5:** Redesigned tabs to click together easily; added directional motors with thin cages for safety; optimized for easy printing

Technologies Used: 3D Modeling, 3D Printing, Additive Manufacturing, Rapid Prototyping, Iterative Design

---

Test Cell Design for UW Hyperloop

March 2016 - August 2016

Description: Test bench designed to measure thrust, braking, and levitation generated by magnetic rotors for Hyperloop transportation system

Key Achievements:

- Designed two versions of test cell apparatus (V1 and V2)

- Implemented strain gauge measurement systems for isolated thrust vectors
- Created designs allowing for interchangeable testing elements
- Enabled adjustment of linear actuators for actual running specifications

Technologies Used: 3D Modeling, SolidWorks, Mechanical Engineering, Test Apparatus Design

---

TEST SCORES

GRE (Graduate Record Examination)

Taken: August 2011

- Verbal Reasoning Score: 163
- Quantitative Reasoning Score: 159
- Analytical Writing Score: 4.0
- Note: One of first to take new form of GRE

SAT (Scholastic Assessment Test)

Taken: 2001

- Verbal Score: 620
- Quantitative Score: 720
- Equivalent in New System: 2010

LANGUAGES

English: Native or bilingual proficiency
French: Limited working proficiency

VOLUNTEER EXPERIENCE

Security Officer

Baha'i World Centre | May 2003 - May 2004 (1 year 1 month) | Haifa and Akka, Israel

Focus Area: Civil Rights and Social Action

Description: Service opportunity at Baha'i World Centre working as security officer maintaining official presence to deter terrorism.

Key Responsibilities:

- Worked with local guards scanning tourists for incendiary devices
- Communicated with locals, giving general information about Gardens
- Performed gate, building, and grounds checks at night for vandals, intruders, or abnormalities
- Maintained contact with dispatch about issues and continuous check-ins to identify current location
- Worked 9 shifts over 12 days (3 of each section: Day, Evening, Night) with 2 days of rest

Additional Contributions:

- Volunteered in other departments on days off (gardening, moving furniture, working as guide)
- Collaborated with 750 volunteers from almost every country
- Contributed to daily upkeep and growth of human resources and social and economic development

Cultural Experience: Multi-cultural experience living in Israel and working alongside people from India, Nepal, Africa, Canada, Mexico, and many more countries

---

PROFESSIONAL MEMBERSHIPS & ORGANIZATIONS

ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers)

August 2015 - Present
Associated with University of Washington

ASME (American Society of Mechanical Engineers)

January 2015 - Present
Associated with University of Washington

PROFESSIONAL RECOMMENDATIONS

Nate Sniadecki
Professor at University of Washington
Recommendation dated: November 1, 2016

"David is a talented mechanical engineer. He is responsible, hard-working, and a team-player. His passion for engineering learning goes beyond the classroom."

PORTFOLIO

Condensed Portfolio of Work available on LinkedIn profile
